

SIREN FIELD USER provides a consistent, professional means to gather important patient data while in the field. Field User transmits patient records in real-time for immediate access both within your organization and by outside agencies, such as receiving destinations and national reporting repositories.

SIREN DATA ANALYTICS compiles your data into an advanced data warehouse where you can access critical data to help you make data-driven decisions, improve patient outcomes and create the reports you need.

MEANINGFUL DATA
Our user-intuitive platform ensures all teams input consistent data to best leverage reporting data for more informed decision making.

PROTOCOLS/COMPLIANCE
Drive protocols & ensure compliance with an organization-defined interface that walks in-field users through in-field steps for better patient care & data-driven decision-making.

ANALYTICS
Extracting data is simple with Siren's BI agnostic approach. You can use any Business Intelligence tool to query data & create the reports you need.

ADVANCE REPORTING
Create & share advanced reports, available in a variety of formats such as list, crosstab, charts, chart & list, & interactive (drill-through) reports.

OUTCOMES
Examine patient outcomes to ensure consistent improvement in your internal processes.

Emergency Reporting provides a premier records management solution to first responders worldwide. Today, more than 754,000 first responders at nearly 7,000 Fire/Rescue agencies of all sizes are supported by Emergency Reporting.

Our ePCR is designed for the mobile healthcare clinician to capture patient care information when and where needed. The workflow design of Field User is simple and follows the logic flow that clinicians are trained to assess and treat their patients, while keeping in mind the needs of administrators tasked with delineating data to create robust reports.
